CALMARE PAIN RELIEF THERAPY

“Calmare Pain Therapy Treatment is a U.S. FDA 510(k)-cleared and European CE mark-certified, non-invasive pain therapy device for the management of chronic and acute pain. It is used to treat debilitating pain, especially when narcotic painkillers, such as morphine, are ineffective”.

How does the Calmare MC-5A device work?

Patients are comfortably connected to the Calmare Pain Therapy Treatment® device via small electrodes (similar to those used in ECG and other medical procedures) placed on the patient's skin at the pain site/s. The device then sends a very low current of electrical stimulation through the skin and nerve fibers, which carries a “no pain” signal to the brain, essentially overriding the previous pain signal.

In some cases, pain relief has been reported after the first treatment, but each patient's case is unique.

During the daily treatments over a two-week period, the patient's pain steadily decreases to allow the patient to resume normal daily activities and enjoy a rich quality of life that had previously been eroded by living with chronic pain.

Calmare Therapy has been successful in treating pain associated with:

- *Neck pain, Back pain, failed back surgery pain.*
- *Fibromyalgia pain, Myofascial pain syndrome.*
- *Neuropathy (nerve/nervous system), including CRPS/RSD (Complex Regional Pain Syndrome, Reflex Sympathetic Dystrophy), Chemotherapy induced peripheral neuropathy(CIPN), Sciatica and Lumbar pain, Phantom limb syndrome, Peripheral neuropathy including diabetic Neuropathy, Carpal Tunnel syndrome, Trigeminal Neuralgia etc.*
- *Oncology (cancer), including pancreatic, breast, bladder, lung, prostate, colon, rectal, kidney, ovarian, cervical, liver, uterine, etc.*

The Calmare Pain Therapy Treatment has helped thousands of patients reduce and manage their pain while many patients report becoming pain-free after completing the treatment protocol. It is safe and free from side effects and addiction associated with other treatment options. Regardless of pain intensity, during each treatment, a patient's pain can be completely removed for immediate relief.

QUESTIONS AND ANSWERS ON CALMARE THERAPY:

Q: What is the typical treatment protocol?

The initial treatment protocol consists of 10-12 consecutive treatments of 20 to 60 minutes once a day (5 days a week for 2 weeks). Additional "booster treatments" may be needed.

Q: Have there been treatment results with "no pain" periods of seven days or longer?

In most cases, after the initial treatment protocol, patients experience reduced or no pain. However, it is most important that the chronic pain is first properly diagnosed as neuropathic or oncologic and not musculoskeletal pain. The average recorded "no pain" period is 1 to 3 months, with 1 year being the longest interval without "booster treatments". Patients who have had chronic pain for an extended period of time may need "booster treatments" to rid of any lingering pain.

Q: How long will I feel pain relief?

Clinical studies and current data suggests that patients will experience pain relief for periods ranging from one to three months with some documented cases exceeding one year. In certain instances such as sciatica, patients have experienced complete relief.

Q: How many treatments will I need?

Clinical studies indicate that the most effective treatment protocol is 10 to 12 treatments over a two-week period with booster treatments in certain cases.

Q: Will the treatment hurt?

Calmare Therapies Pain Relief System is a non-invasive, non-narcotic, pain-free treatment. There is no discomfort and the patient typically feels a mild tingling as the therapy reprograms the patients' pain signals. When the certified clinician reaches optimal targeting of the patient's nerve fibers processing pain signals the patient will experience "no pain" during treatment. There are no known side effects to the Calmare Therapies Pain Relief System, except for very rare skin irritation caused by the pads applied to the skin.

Q: Who cannot use the Calmare Therapies Pain Relief System?

The Calmare Therapies Pain Relief System MC-5A medical device creates a low energy electrical impulse which travels through the patients' nerve fibers delivering a "no pain" signal to the patient's brain. The process "convinces" the brain that the area of pain is now normal, resulting in prolonged pain relief. Because of the manner in which Calmare Pain therapy operates, you should not have the treatment if you suffer from or have a pacemaker, implantable defibrillator, vena cava or aneurysm clips or nerve stimulator device; you are, or could be pregnant; you suffer from epilepsy; you are using anticonvulsants. If you have any other medical concerns that you would like to discuss please call us today to talk to our physician.

Q: How much does Calmare Therapies Pain Relief System Treatment cost?

Please call our office on 056-7721726 to discuss cost of the treatments and payments however we have revised the treatment costs as compared to other centers in the world where calmare treatment is provided so that the treatment is affordable and is certainly less expensive than the cost of taking pain medicines for months or years and our revised sessional calmare treatment costs should fit every budget so that every patient suffering from severe pain will have an opportunity to be treated.
